PROFESSIONAL SUMMARY

Second-year B.Tech CSE student with hands-on experience building full-stack web applications using React.js, Node.js, Express.js, MongoDB and REST APIs. Interested in software development and full-stack engineering. Seeking an SDE / Full Stack internship to apply technical skills to real-world projects.

TECHNICAL SKILLS

Languages	JavaScript, Python, TypeScript, SQL
Frontend	HTML5, CSS3, React.js, Tailwind CSS
Backend	Node.js, Express.js, REST APIs
Database	MongoDB (Mongoose), PostgreSQL (Supabase)
Tools	Git, GitHub, VS Code, Postman
Other	JWT Authentication, LLM APIs (Gemini, Groq), Responsive Web Design

PROJECTS

InternTrack – Internship Application Tracker

React.js, Vite, Tailwind CSS, Node.js, Express.js, MongoDB Atlas, JWT, Groq API

- Built a full-stack MERN application to track internship applications, with JWT authentication, bcrypt password hashing and protected REST API routes.
- Implemented CRUD, search, status filtering and a dashboard with live status counts; every query is filtered by the logged-in user so each user only sees their own data.
- Integrated the Groq API to generate follow-up emails for each application, with a one-click copy option.
- Used MongoDB Atlas with Mongoose and deployed the frontend on Vercel.

Inventra AI – Smart Inventory Management Platform (Team Project)

Next.js, React.js, TypeScript, PostgreSQL, Prisma ORM, Groq API

- Contributed to a full-stack, AI-powered inventory management platform (Next.js, PostgreSQL) with secure authentication and real-time analytics.
- Owned the Automation & Smart Features module: expiry checking, low-stock detection, and automated email alerts and notifications to reduce manual inventory monitoring.
- Built OCR invoice scanning (Tesseract.js) and live camera barcode scanning (ZXing), including image preprocessing to improve scan accuracy.
- Implemented frontend-backend API integration, used the Groq API for AI-powered inventory recommendations, and built an interactive dashboard with React and Tailwind CSS.

CORE9 – Multi-Agent Crisis Intelligence Platform

React.js, Vite, Node.js, Express.js, Supabase, Gemini API

- Designed an 8-agent Gemini workflow (Vision, Situation Analysis, Decision, Planning, Resource Allocation, Communication, Monitoring, Report) where each agent builds on the previous agent's output.
- Built the full-stack platform with authentication, incident management, task tracking, analytics and emergency contacts.
- Turned raw incident data into structured decisions and automated summary reports.

EDUCATION

NIAT at Chaitanya Deemed to be University – B.Tech, Computer Science & Engineering (CGPA: 10)	2025 – 2029
Oxford VIT Junior College – Intermediate (12th) (98%)	2023 – 2025
Sai Vikas High School – 10th (94.83%)	2022 – 2023

ACHIEVEMENTS

- Built AI-powered applications at the Murf AI Hackathon, Build to Ship Hackathon and the Takeover Hackathon.
- BRAVE Program: identified prospective clients and proposed web-based solutions to grow their revenue.
- Earned the Novice badge in the GRIT AI System Mastery track.
